# Classified Networks AI Agreements

May 1, 2026

## **The War Department Announces Agreements with Leading AI Companies to Deploy Capabilities on Classified Networks**

The War Department has entered into agreements with eight of the world's leading frontier artificial intelligence companies, SpaceX, OpenAI, Google, NVIDIA, Reflection, Microsoft, Amazon Web Services, and Oracle to deploy their advanced AI capabilities on the Department's classified networks for lawful operational use. These agreements accelerate the transformation toward establishing the United States military as an AI-first fighting force and will strengthen our warfighters' ability to maintain decision superiority across all domains of warfare.

Integrating secure frontier AI capabilities into the Department's Impact Level 6 (IL6) and Impact Level 7 (IL7) network environments will streamline data synthesis, elevate situational understanding, and augment warfighter decision-making in complex operational environments. SpaceX, OpenAI, Google, NVIDIA, Reflection, Microsoft, Amazon Web Services, and Oracle will provide resources to deploy their capabilities on both IL6 and IL7 environments. This effort supports the Department's AI Acceleration Strategy by enabling new capabilities across its three core tenets of warfighting, intelligence, and enterprise operations.

GenAI.mil, the War Department's official AI platform, is already demonstrating the scale and impact of this acceleration. Over 1.3 million Department personnel have used the platform, generating tens of millions of prompts and deploying hundreds of thousands of

agents in only five months. Warfighters, civilians and contractors are putting these capabilities to practical use right now, cutting many tasks from months to days.

The Department will continue to build an architecture that prevents AI vendor lock and ensures long-term flexibility for the Joint Force. Access to a diverse suite of AI capabilities from across the resilient American technology stack will give warfighters the tools they need to act with confidence and safeguard the nation against any threat.

Together, the War Department and these strategic partners share the conviction that American leadership in AI is indispensable to national security. This leadership depends on a thriving domestic ecosystem of capable model developers that enable the full and effective use of their capabilities in support of Department missions. As mandated by President Trump and Secretary Hegseth, the Department will continue to envelop our warfighters with advanced AI to meet the unprecedented emerging threats of tomorrow and to strengthen our Arsenal of Freedom.
