Artificial intelligence (<https://www.nist.gov/artificial-intelligence>)

Center for AI Standards and Innovation (CAISI)

The Center for AI Standards and Innovation (CAISI) will serve as industry's primary point of contact within the U.S. government to facilitate testing and collaborative research related to harnessing and securing the potential of commercial AI systems. To that end, CAISI will:

- Work with NIST organizations to develop guidelines and best practices to measure and improve the security of AI systems, and work with NIST staff to assist industry to develop voluntary standards.
- Establish voluntary agreements with private sector AI developers and evaluators, and lead unclassified evaluations of AI capabilities that may pose risks to national security. In conducting these evaluations, CAISI will focus on demonstrable risks, such as cybersecurity, biosecurity, and chemical weapons.
- Lead evaluations and assessments of capabilities of U.S. and adversary AI systems, the adoption of foreign AI systems, and the state of international AI competition.
- Lead evaluations and assessments of potential security vulnerabilities and malign foreign influence arising from use of adversaries' AI systems, including the possibility of backdoors and other covert, malicious behavior.
- Coordinate with other federal agencies and entities, including the Department of Defense, the Department of Energy, the Department of Homeland Security, the Office of Science and Technology Policy, and the Intelligence Community, to develop evaluation methods, as well as conduct evaluations and assessments.
- Represent U.S. interests internationally to guard against burdensome and unnecessary regulation of American technologies by foreign governments and collaborate with NIST staff to ensure U.S. dominance of international AI standards.
