Artificial intelligence is moving even faster than many thought. In the span of three years, the world went from [wearily experimenting](#) with OpenAI's ChatGPT to entire companies [integrating Anthropic's Claude Code](#) into their workflows. The speed of AI's progression, technologically and culturally, has surprised many—including Anthropic CEO Dario Amodei, who [warned](#) in a 20,000-word essay in January that society could experience catastrophic impacts within a year or two.

But experts warn this fast-paced innovation is leaving one essential group behind: women.

The jobs women hold are [three times](#) more likely to be automated by AI. Despite this fact, women are using AI at a rate [25% lower](#) than men on average. This paradox is compounded by the fact that women are underrepresented in AI leadership and development, even as some of the companies with the [most advanced AI adoption](#) are led by women.
